M Tube Fitting End is rated to the working pressure of tubing as listed in the tubing tables. The working pressure is de-rated as the temperature is elevated.

To determine working pressure at an elevated temperature, multiply the working pressure listed in table 1 through 6 by the applicable factor shown in table 7.

Example

1. SS316 seamless tubing 1/2 in. OD x 0.065 in. wall.
2. The working pressure at – 20 to 100 °F (-28 to 37 °C) is 5100 psig as listed in table 1.
3. To determine working pressure at 1200 °F (649 °C), multiply the 5100 psig by the factor 0.37 from the table 7.
 $5100 \text{ psig} \times 0.37 = 1887 \text{ psig}$
